## Gel Nail

Gel nail sticker is a nail material that allows you to easily and quickly do beautiful self-nails at home.

It is simple to use because it is a simple type that does not require baking with LED and is completed by just pasting it.

It is not a hard and standardized size like plastic nail tips, so you can choose a size similar to your own nail, cut it with nail clippers and grind it with a nail file to use it just right.

## Semicured Gel Nail

Liquid gel nail polish is applied to the film and only 50% to 60% hardened to form a soft sticker.

After attaching this sticker to your nail, cure it using a gel lamp for 1–2 minutes until the sticker becomes hard, then it is transformed to fit your nail and adheres perfectly.

It is not a hard and standardized size like plastic nail tips, so you can choose a size similar to your own nail, cut it with nail clippers and grind it with a nail file to use it just right.
